Claims 1-23 are pending in this application.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6 and 12-15, drawn to a method of treating animals, classified in class 514, subclasses 25, 27, 450, 451, 453, 456, 460, 499, 500, 533, 557, 728, 970, 973, class 424, subclasses 630, 638.
- II. Claims 8 and 16-18, drawn to a method of treating plants, classified in class 504, subclasses 190, 191, 291, class 514, subclasses 25, 27, 450, 451, 453, 456, 460, 499, 500, 533, 557, 728, 970, 973, class 424, subclasses 630, 638.
- III. Claims 19-23, drawn to a method of treating inanimate surfaces, classified in class 422, subclass 28+.

Claims 7 and 9-11 link inventions I, II and III. The restriction requirement between the linked inventions is subject to the nonallowance of the linking claims, claims 7 and 9-11. Upon the allowance of the linking claim(s), the restriction requirement as to the linked inventions shall be withdrawn and any claim(s) depending from or otherwise including all the limitations of the allowable linking claim(s) will be entitled to examination in the instant application. Applicant(s) are advised that if any such claim(s) depending from or including all the limitations of the allowable linking claim(s) is/are presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to provisional statutory and/or

Art Unit: 1616

nonstatutory double patenting rejections over the claims of the instant application.

Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

The three inventions are distinct by virtue of their treatment of different subjects, viz. animals, plants, and inanimate surfaces.

The search fields for each of the three inventions would be divergent. Group II includes method of increasing plant yields. Clearly such divergent inventive concept would require searching in places where no pertinent art to the other invention would likely exist. Method of treating an animal such as humans require considerations such as safety and toxicity, which would be less important or even not important for treating inanimate surfaces. Therefore, prior art applicable to one invention would not necessarily be applicable to the other invention(s) in the absence of a nexus type teaching. Under the facts of this application, given the separate classification and the breadth of divergent utilities readable within even one invention group (see claim 7, for example), the search and examination of more than one invention group would place a burden on the Examiner that would be undue.

For the reasons of distinctness and undue burden, the restriction requirement as set forth above is deemed to be proper.

Art Unit: 1616

A telephone call was made to Mr. Gregersen on 7/18/2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
